# You've waited long enough for **Secondary Protection!!**

## Secondary Infection Facts

Approximately 2 million patients contract Hospital Acquired Infections (HAI's) each year - 100,000 people die. 1 in 10 hospital patients contract HAI's during their stay. Secondary Infections in hospitals kill more Americans every year than car accidents, fires and drowning combined. Microorganisms such as bacteria can live on unprotected garments up to 56 days.

## Financial Ramifications

Hospital infections are associated with nearly \$30 billion of AVOIDABLE expenditures. Post surgical wound infections more than double a patient's hospital costs. Staph infections in hospitals cost more than triple the average costs of other patients.

## The Medi Threads Antimicrobial Solution

Medi Threads manufactures antimicrobial textiles using state-of-the-art Microban Technology. Microban is the world leader in antimicrobial protection with over 1000 products worldwide. Microban is currently featured on many existing medical products including; dental trays, incise drapes and wound dressings.

## Microban Performance

Microban protection penetrates the cell wall of microbes and disrupts key cell functions so that microbes cannot function, grow or reproduce.

## The Medi Threads Advantage *Traditional products, technological solutions!*

Medi Threads poly/cotton products are odor resistant, durable, safe and affordable. All Medi Threads textiles are treated with a non-metal based FDA and EPA approved antimicrobial agent called triclosan. Medi Threads products can be used with ALL detergents without restriction. Efficacy can last up to 100 Industrial Launderings.

Whether you are affiliated with a Hospital, Industrial Launderer, Distributor or Retailer, we invite you to visit [www.medithreads.com](http://www.medithreads.com) to learn more about us.
